

FRx Components

FRx Desktop – This is sometimes referred to as FRx Financial Reporter. A single user version of FRx Desktop is bundled with each sale of MAS 90 and MAS 200. The MAS 200 SQL version includes a 4 user system. The bundled license allows users to design, generate and view financial reports. FRx desktop can only report off of General Ledger data and has built-in knowledge of the defined GL Chart of accounts, balances and transactions. Customers can also purchase additional seats of FRx Desktop in 3 user increments. See <http://www.frxsoft.com/FRxSoftware/LeftNav/Products/FRx+Financial+Reporter.htm> for more information on FRx Desktop.

Report Launcher – Allows users to generate and view predefined FRx reports. The user can modify report properties including the report date and output format but can not change the report design. The drilldown viewer is not required to view the report output once it has run. The drilldown viewer is embedded in the report launcher license.

DrillDown Viewer - Allows the user to view FRx report output with all the drilldown and viewing capabilities available from within FRx Desktop.

Report Server Engine – enhances report management through scheduled and automated report generation on a server or dedicated PC. Reports generated can be automatically emailed in a variety of formats to the finance department, line of business managers and other stakeholders in the business. The Report Server engine is sold on a per machine basis.

WebView Server – Allows users to view generated FRx report output from a browser over the Internet or Intranet. Full drilldown capabilities are available from the browser viewer. Each WebView Server is bundled with 20 viewers and is sold on a per server basis. Additional WebView Viewers can be purchased in blocks of 10.

WebPort Server – Is an extension to WebView Server. It is a financial portal that offers publishing, storing and managing of FRx reports via the Web, providing both report administration and report viewing online via a Web browser. In addition to FRx report viewing, WebPort can also store and view other documents and files such as Word documents, Excel spreadsheets, Adobe Acrobat documents and OLAP cube files. Customers that require this functionality would purchase WebPort instead of WebView.

FRx Professional – Is a bundle of the above products (Includes 2 FRx Desktop licenses with additional functionality, 4 Report Launchers, 8 Drilldown viewers, 20 WebView Viewers w/ WebView Server and 1 Report Server Engine)

FRx Enterprise – Is a bundle of the above products (Includes 4 FRx Desktop licenses with additional functionality, 8 Report Launchers, 16 Drilldown viewers, 20 WebPort Viewers w/ Web Port Server and 4 Report Server Engines)
