Inventory Management
Payroll
Purchase Order Processing
Sales Order Processing
Visual Integrator

TRS was founded in 1995 and the company has grown to be one of the largest privately held wastewater residual management companies in the U.S., serving Arkansas and nine other states. By 2002 the Dardanelle location was outgrowing its current accounting software. They were using a DOS version of Cougar Mountain and looking for something Windows based. There were too many limitations with the older DOS application. TRS was also looking for something that could integrate their “truck load ticket” data with their accounting software data.module to invoice their customers. From there, the invoice data is exported into another format and imported back into the Payroll module to pay their drivers for the same load tickets. They have also brought their purchase order entry into the MAS 200 system, rather than using an external, manually prepared purchase order.

“ Everyone at Software Solutions is very helpful, they always respond quickly to my needs ”

- Larry Pfeifer

The decision to go with MAS 200 was a group effort says Larry Pfeifer, controller at Terra Renewal Services, “We weighed the plusses and minuses of each of the software packages and MAS 200 won out”. In August of 2002 Allan Harlan of Software Solutions started the installation. TRS had several specific needs for their industry, one of which was to create an interface with MAS 200 and their current access database of environmental data and truck load ticket data. The resulting process has been a real time-saver. The greatest benefit has been much less repetitive data entry. Now they have one point of entry for each load ticket in a new MS Access database. The ticket data is then imported into MAS 200’s Sales Order module to invoice their customers. From there, the invoice data is exported into another format and imported back into the Payroll module to pay their drivers for the same load tickets. They have also brought their purchase order entry into the MAS 200 system, rather than using an external, manually prepared purchase order.

All in all, the new system has streamlined their entry process in a radical way, which has allowed the staff to handle the continued success of their company.
